

MNT SYSTEMS LTD – ELECTRICAL SOLUTIONS AT IT'S BEST

Our company **MNT SYSTEMS Kft.**, takes a leading position on the Hungarian electrical construction market. Regarding the philosophy of our company, we focus on high quality planning, high quality implementation, and maintenance. In addition, we provide one of the best UPS Systems on the Hungarian market called “Newave”.

The owners of the MNT Systems Kft., are highly qualified in the electrical construction field, as engineers and economists. They gained a very good reputation on the market from over 15 years. As the market expects us to provide high quality in the electrical industry, we follow these requirements, with our professional tools, softwares

and well educated professionals. Of course, regarding these requirements, MNT Systems Kft., turned out to be a key player on the market over a short period of time.

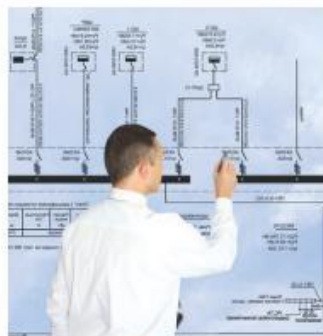

Our business activity ranges from full-service electrical design and construction possibilities, from planning, to execution through to long-term maintenance support together with our own designer team and with contracted design firms, if necessary. Also on any construction work we provide our own project managers, who control the full job process.

High quality planning – high quality implementation – High quality service – High quality product

For us, our profession doesn't only mean to be an ordinary job. We are highly passionate about our profession, which is reflected by our customer satisfaction ratings. Based on the feedbacks from our customers, 98.9% are satisfied in general, with our presented plans, deadlines, and the quality of implementation, and maintenance tasks.

Our partner company, “NEWAVE SA”, Switzerland, developer and manufacturer of NEWAVE UPS products (one of the world's largest manufacturer of UPS Systems) recognized the value of our high quality work, and entrusted us as their official

entrusted distributor for Hungary. They thought that our service, customer service and sales experience, are the perfectly match for products made labeled as “Swiss Quality”. Therefore, from 2011 onwards, one of our main profiles include NEWAVE UPS Systems. Now we can provide high quality requirements, while ensuring highly competitive prices, in any industrial or commercial scope, on the market for uninterruptible power supply.

Planning

Designing means much more than just ideas on paper block. This is a serious dialogue between the client and the designer. A task that ends where both parties can sit back with guaranteed satisfaction. At first, we always provide a plan, which fully supports the implementation of ideas, and later helps running the network operation and maintenance.

As a designer it is important for us that, our clients always gets a plan which fits to the ideas and opportunities and reflects all the needed requirements. As a contractor and maintenance company, we often find ourselves in a situation where documentation is worth nothing. Our aim is to hand over projects, where there is absolutely no difference between what is on paper and what has been done. In addition, all regulations are kept in harmony.

When we plan for you, you receive all the needed documentations that are required for the entire life-cycle of the current project. Hereby we mean from authorization, to implementation and up until maintenance!

Complete design services for electrical industry:

- *Low-voltage power transmission networks*
- *0.4kV switching equipments*
- *interior lighting networks*
- *Outdoor and street lighting*
- *Medium-voltage systems*
- *Uninterruptible power systems*

Construction:

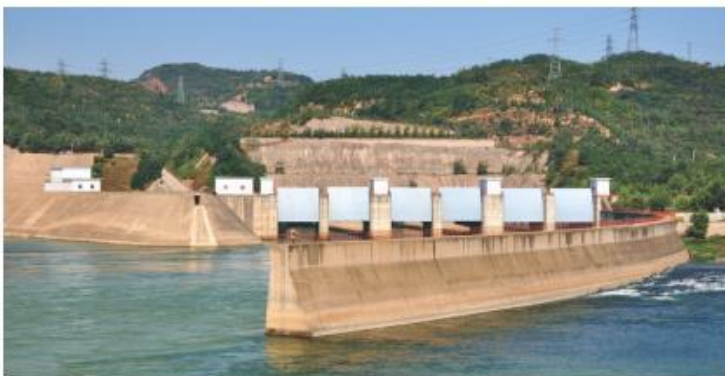

Construction is the phase when ideas come to reality. A perfect plan is worthless if the execution does not comply with the instructions of the designer!

Our professionals are being continuously trained to be the best in their field of integration and construction.

In electrical installation tasks, the following services are at your disposal:

- *Electrical construction management of projects*
- *buildings, office buildings, electrical construction work*
- *industrial electrical construction work*
- *Cable management, both indoor and outdoor*
- *Energy supply installation for Security systems, construction*
- *Street lighting, and decorative street lighting constructions*
- *Street lighting modernization*
- *Establishment of transformer stations*
- *Switching equipment manufacture and installation*

Maintenance and Service:

Our company is able to efficiently perform all kinds of electrical services and maintenance work across the country, regardless of whether the design and execution work is related to us or not.

Of course, conversion and (or) modernization tasks, upgrades, do not pose a problem for us! Contact us and you will receive a quote from us for all needed electrical tasks, and in addition we are at your disposal with the most modern uninterruptible power systems! Put us to the test!

All of our activities are provided with ISO 9001
